Put Your Degree to Work: Practical Career Strategies for Ph.Ds

Dr. Peter S. Fiske
June 25, 2007
CEDAR – Santa Fe
Why am I here?

then

1996

Shrinking Job Market
Young Physicists Hear Wall Street Call
Black Hole
Scientific Opportunities
No PhDs Need Apply
Science: The government said we wouldn’t have enough science majors
IT Market Shortage

now

1996

Unemployment Dips To 4.8%
Wrong

2007

Copyright 2006 – Peter S. Fiske
Why am I REALLY here?

• **Experience**
  – My career path (so far) has been unusual (for a Geophysicist) but highly stimulating and enormously enjoyable
  – I benefited from numerous mentors and got lots of good advice
    • Pass some of it along

• **Concern**
  – Young S&Es don’t get very good career development advice
  – Such advice is of greatest value at the START of your career!

• **Prejudice**
  – I believe that technically-trained individuals have enormous opportunity to improve the world
Exploring outside of our own career field can be ...

Frightening
Confusing
Amazing
Liberating
Empowering
Now the Good news!

Young people themselves don’t realize how valuable they are with a Ph.D. It means an ability to think deeply, solve problems, analyze data, criticize and be criticized. [Ph.D.s] often don’t realize the breadth of what they are capable of doing.

Neal Lane (Former Director, National Science Foundation)

We possess many of the traits and skills that are of highest value in the “real world”
Transferable skills

1. ability to function in a variety of environments and roles
2. teaching skills: conceptualizing, explaining
3. counseling, interview skills
4. public speaking experience
5. ability to support a position or viewpoint with argumentation and logic
6. ability to conceive and design complex studies and projects
7. ability to implement and manage all phases of complex research projects and to follow them through to completion
8. knowledge of the scientific method to organize and test ideas
9. ability to organize and analyze data, to understand statistics and to generalize from data
10. ability to combine, integrate information from disparate sources
11. ability to evaluate critically
12. ability to investigate, using many different research methodologies
13. ability to problem-solve
14. ability to do advocacy work
15. ability to acknowledge many differing views of reality
16. ability to suspend judgment, to work with ambiguity
17. ability to make the best use of "informed hunches"

Did you know a Ph.D. teaches you these things?
Personal qualities

1. intelligence, ability to learn quickly
2. ability to make good decisions quickly
3. analytical, inquiring, logical-mindedness
4. ability to work well under pressure and willingness to work hard
5. competitiveness, enjoyment of challenge
6. ability to apply oneself to a variety of tasks simultaneously
7. thorough, organized and efficient
8. good time management skills
9. resourceful, determined and persistent (and able to live on $2K/month!)
10. imaginative, creative
11. cooperative and helpful
12. objective and flexible
13. good listening skills
14. sensitive to different perspectives
15. ability to make other people "feel interesting"

Employers in all fields are looking for people with these traits

Copyright 2006 – Peter S. Fiske
20 successful PhDs in non-academic careers were asked ...

“Of the many skills you developed while in graduate school, which ones are the most valuable to you now?”

Finding one’s own path and taking initiative with little assistance
Ability to work in a high-stress environment
Independence
Maturity
Computer skills
Circumventing the rules
Learning to seek out problems and solutions
Ability to persuade
Ability to create
Ability to work productively with difficult people

and my favorite:

The ability and courage to start something even if you don’t know how yet

Copyright 2006 – Peter S. Fiske
What image does the PhD conjure?
The Curse of Being Smart

We have become very highly skilled → We tend to value our skills the most

We can conceptualize → We can conceive of complications

We are used to knowing it all → We fail to ask basic questions

We are intellectually smart → We fail to appreciate other forms of smart

We are used to being exceptional → We don’t like to fail
Match the Person and the Career

Cell Biologist  Science Media Entrepreneur
Chemist  Congressional Staffer
Astrophysicist  Financial Analyst
Biophysicist  Management Consultant
Geologist  Rodeo Star
English  Experimental Physicist
Plant Biologist  Book Editor
Oceanographer  Acquisition Editor
Geophysicist  Software Entrepreneur
Mathematician  High School Teacher
Electrical Engineer  Secretary of Defense
Medieval History  Programmer
Match the Person and the Career: The Answers

Cell Biologist ____________ Science Media Entrepreneur
Chemist _______________ Congressional Staffer
Astrophysicist ___________ Financial Analyst
Biophysicist ______________ Management Consultant
Geologist _________________ Rodeo Star
English _________________ Experimental Physicist
Plant Biologist ____________ Book Editor
Oceanographer ______________ Acquisition Editor
Geophysicist ______________ Software Entrepreneur
Mathematician ______________ High School Teacher
Electrical Engineer __________ Secretary of Defense
Medieval History _____________ Programmer

They do have ONE thing in common: They’re SMART ... like YOU!
The 80:10:10 rule

How will you grow and gain new skills if you don't invest the time?

How will people know of your abilities if you don't tell them?
The skills that will REALLY count ...

Leadership
Persuasion
Humor
Tact
Understanding of Risk and Reward
Understanding of Investment and Return
Organization
Sensitivity
Drive
Perspective
Creativity

Good News: You can LEARN These!

“Give me ten people who have all of these skills and I could do anything”
Typical questions asked by PhDs facing an uncertain job market

“How do I get a job in ______?”
“How do I write a resume?”
“What jobs call for my skills?”
“Where is the bathroom? I’m going to be sick!”

Better questions are:

What do I enjoy doing and what am I good at?
What are various careers like?
What careers and jobs are a good match to my skills, interests, and values?
Who can I talk to?
Why are these questions better?

- PhDs are preoccupied with matching skills and ignore other important factors in choosing a career
- PhDs lack information and exposure to other career fields
- Career change for PhDs can be harder:
  - lack of an established pathway
  - fear/anger of getting a degree “for nothing”
  - ignorance/fear of life in the “real world”

If you don’t like what you do for a living, you probably won’t be very good at it!
Steps in the Career Planning Process

Career development is a continual process

Career development is part of being a professional

most people think it starts here
but
it really starts down here

Copyright 2006 – Peter S. Fiske
Self-Assessment:

- Informal methods
  Initial brainstorming

- Self-guided methods
  Interest Exercises

- Formal methods
  Exams and Tests
  Career counseling

Make your neuroses work for you!
Initial brainstorming

- What do I enjoy doing most?
- What do I like most and least about my present career?
- What are my values?
- What do I like to read?
- What organizations or jobs sound interesting to me?
- When have I been my happiest at work?
- When have I been most unhappy?
Self-guided exercises

1. Make a two-column list of everything you can think of that you like and dislike about the academic career, and then assign priorities. What do you learn about your values, interests and skills as they affect the work and workplace?

2. If you could live five lives simultaneously, and explore a different talent, interest, or lifestyle in each, what would you be in each of them?

3. Think back over the experiences you have had in your life - in the areas of work, leisure, or learning - and pick three to ten that have the following characteristics:
   a. you were the chief or a significant player
   b. YOU - (± the world or significant others) - regard it as a success:
      you achieved, did, or created something with concrete results, or acted to solve a problem, or gave something of yourself that you are proud of and are pleased by
   c. you truly enjoyed yourself in the process.

List each of them, write why you consider it a success, and write a paragraph or two detailing the experience, step by step.
Formal methods of self-assessment

Myers-Briggs Type Indicator Test - analyzes your beliefs and interests and categorizes you into 1 of 16 personality types. Used to understand how individuals may work well or not well together.

Strong Interest Inventory - analyzes your interests and skills and compares them to representative people in a variety of careers and work environments.

Career Beliefs Inventory - assesses the sources of anxiety about jobs, careers and career change.

Skills and Values Card Sorts - enables you to rank and examine the types of activities you find fulfilling and the skills you feel strongest in.

Your school’s Office of Career Services has some of these (and many more)… for free
Exploring the World of Work

1. Keep your eyes and ears open
   • read the newspaper
   • talk to people
   • browse the Web
   • hear outside speakers

2. Build your skills base
   stay conversant with the latest technologies
   attend workshops
   take a class or two outside your area

3. Build your NETWORK
Networking: How most people get their jobs

Networking is:
- Developing relationships with people who share your professional or personal interests
- Alerting them to your career goals and abilities

Networking is not:
- Tiresome schmoozing for a job
- Restricted to the slick and superficial

As a PhD you have been networking throughout your career, you just probably didn’t realize it!
Who is my Network?

Anybody you know and feel comfortable talking to can be part of your Network:

- Schoolmates
- Recent graduates
- Collaborators
- Friends from High School or College
- Past bosses and colleagues
- Family
- People you meet at seminars, conferences and workshops
- Other people who are looking for jobs

and

Anybody they know

The most valuable in your network are those already established in the career field that interests you and who are willing to give you help.
“The best preparation you can make toward the goal of having an [academic] career is to find yourself a “research aunt or uncle,” someone with little or no authority over you, who has enough experience to act as a sounding board and giver of accurate advice. Do not be shy about getting to know the people outside your advisor’s realm.”

Peter Feibelman, A Ph.D. is NOT Enough!

Exploring the Postdoc Path

The first comprehensive study of postdocs in the US, released April 6, 2005

Interesting findings include:
- Most post-docs report being satisfied with their experience
- Majority of post-docs are non-citizens
- Slightly more women than men
- Average salary = $38,000

But the most important conclusion:

*The more structure and oversight in the post-doc program, the better the outcome for post-docs*

Focusing on Specific Opportunities: Becoming an Insider on Every Job

Research your career field of interest as thoroughly as you research your science

Stalk your next job like a big game hunter

Techniques for getting on the inside track:
- Informational Interviewing
- Interning
- Volunteering
- Part-timing
- Moonlighting
- Consulting
- Incorporating the outside world in your research
Informational Interviewing

“Going directly to places where you would like to work is six times as effective as mailing out résumés and cover letters.”

Richard Bolles- What Color is Your Parachute

Advantages to Informational Interviewing:

• you are in control
• you can ask sticky questions that wouldn't be appropriate in a job interview
• you can see people in their actual work environment
• you can get feedback and advice
• you can make sure the work environment is right for you
• you can gain visibility
• you can practice being perfect for when it really counts
Informational Interviewing: How do I get started?

• Get a point of contact through your network or the career planning and placement center you are using

• contact the person by phone or e-mail, explain that you want to learn more about the career field and that you got their name from ____. They may refuse or say that another person would be more appropriate. If so, contact that person and move forward.

• prepare some of your questions in advance - don't waste time: a typical informational interview is only 30 minutes. People do NOT enjoy answering questions that could or should have been investigated elsewhere

• questions asked usually pertain to:
  1. Required background and training
  2. Specific information regarding the career
  3. Personal experiences
  4. Advice
  5. Future trends

If you do well the person you talk to may end up being a useful part of your network
Informational Interviewing: Some final advice

• **Treat it like a formal interview for a job:**
  – do your homework
  – think carefully about what you want to learn
  – prepare questions
  – act professionally
  – write a thank-you note

• **Do not treat it like a formal interview for a job:**
  – do not ask for a job, even indirectly
  – do not speak with one person and assume you have the whole story
Why are people willing to be bothered?

- People like to “give back”
- People like talking about themselves
- Finding fresh talent is critical to an organization’s success
- Information transfer is a two-way process they may learn something important from you
Becoming an insider through ...

- Internships
- Volunteering
- Part time work
- Moonlighting
- Consulting
- Incorporating outside topics into your research
True or False:

The purpose of a résumé is to get you a job

A résumé is a description of all your past achievements and work history

An individual résumé can be sent out to many different employers without alteration

CVs and résumés are basically interchangeable

And now for the answers ....
The answers:

The purpose of a résumé is to get you an INTERVIEW, not a job.

A résumé is a description of those past experiences that are MOST relevant to the position being sought. A resume is as much about where you are going as it is where you have been.

You should adapt your résumé for each specific job opening and you should USE THE WORDS IN THE JOB DESCRIPTION as much as possible.

CVs and résumés are totally different documents and should NOT be used interchangeably. If you are uncertain whether an employer wants a CV or a résumé ASK THEM!
A methodology for answering questions: **STAR**

<table>
<thead>
<tr>
<th><strong>Situation/Task:</strong></th>
<th>Describe the situation you encountered. Give the background, and its relation to you.</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Action:</strong></td>
<td>Describe what YOU did to address the situation or solve the problem.</td>
</tr>
<tr>
<td><strong>Result:</strong></td>
<td>Describe the result of your actions.</td>
</tr>
</tbody>
</table>
Negotiating an offer

1. Delay the salary negotiations as long as possible - try not to get locked into a salary before you are offered a job.

2. Value the offer fully. Consider these other parts of compensation:
   - health care
   - schedule of raises
   - bonus plan
   - commission plan
   - stock option
   - pension plan
   - profit sharing plan
   - employee education/tuition reimbursement
   - stability of company
   - dependent tuition reimbursement
   - paid parking
   - car provided
   - vacation
   - sick leave
   - maternity/paternity leave
   - flex time/alternative work schedule
   - anticipated work hours
   - relocation allowance
   - potential for advancement

Get it in Writing!
Perceptions and Realities: Overcoming Stereotypes

According to business people, academics/scientists are:

• simple minded about money
• impractical about time
• no sense of deadlines
• socially passive
• value ideals as absolutes

Other potential perceptions to overcome:

• hermit vs. leader
• arrogant vs. team player
• rebel vs. organizer
• problem person vs. solution person
Don’t forget your own misconceptions…
Myths and Realities of the Modern Job Market

Myth 1# Find a job that matches your skills
Myths and Realities of the Modern Job Market

Myth 1# Find a job that matches your skills

Reality #1: SKILLS, VALUES and INTERESTS are all critical aspects of finding a fulfilling career.

“If you are applying for a job for which you are fully qualified, you’re applying for the wrong job!”
Myths and Realities of the Modern Job Market

Myth #2: Employers care only about technical skills
Myths and Realities of the Modern Job Market

Myth #2: Employers care only about technical skills

Reality #2: Employers care about lots of things in addition to skills:

- Personality
- Degree of Fit
- Learning Ability
- Leadership
- Communication Skills
- Persuasion Skills
- Drive

“I can teach a smart person how to do all this stuff - I can’t teach an employee to think, act on their own, or CARE.”
Myths and Realities of the Modern Job Market

Myth #3: You should map out your career trajectory many years into the future
Myths and Realities of the Modern Job Market

Myth #3: You should map out your career trajectory many years into the future

Reality #3: Serendipity, unplanned detours, and “setbacks” are inevitable. The people who can exploit chance opportunities, explore new areas and make the best of setbacks tend to be happier and more successful.

“Five years ago, I would never have predicted that I would end up here!”
Some final thoughts

1. Job hunting in the new century involves personal connections, chance encounters, and random opportunities.

2. The more people you know, the greater your "job cross section."

3. Getting a job in science requires the same job hunting skills and techniques as any job (including getting a job in academia).

4. Thinking about finding a job is stressful, demoralizing and produces anxiety. Actually doing something about finding a job is liberating, empowering and fun.

5. The more you enjoy what you are doing the better you'll do it.

6. You can serve science, your community, and your country in many different environments - don’t be afraid to consider a non-traditional career path just because it is unfamiliar to you, your advisor, your department or your family.
